RADONE

RAPID APPLICATION DEVELOPMENT

BRAND CONCEPT

Atom, as a basic element, establishes links with other particles, which origins matter. RadOne, through components and intuitive and fast links generates source code, the web application matter. This characteristic is represented by the particles evolution, associated with the application programming speed.

LINKS

ATOM   EVOLUTION   MATTER

KEY BENEFITS

- Rapid Web application development
- 50% Development time reduction
- Multiplatform application generation
- Significant project cost and risk reduction
- Allows interface design by business users without programming skills

RadOne is
a productivity tool
based on JAVA that
significantly reduces
the project time,
cost and risk

DESKTOP

MODULES
Support for multi-module project setup and configuration for your application development

DATA AND FLOW
Domain modelling and application flow design

DESIGN
Page layout /screen design and wireframing of different functionalities

GENERATION
Automatic source code generation / re-generation preserving the code developed by the programmer

EXTENSION
Business rule development and application server deployment

KEY FEATURES

- Application domain (database) modeling. The model can be imported and exported from/to an existing database

- Flow and screen design through drag & drop components

- Application prototyping and preview at design time

- Automatic functional documentation generation

- Automatic JAVA source code generation

- Different user profiles according to project role: functional, programmer and management
