

What is...

ZapView is a real time search and data processing global system, fully supported on web technologies. ZapView can connect to different data sources and perform simple and advanced searches. It also extracts knowledge in real time analysis from all the indexed data of the connected systems.

Functionalities

- ▶ Global search on all connected systems: databases, web crawler, file system and web services
- ▶ Indexing large volumes of information in any format
- ▶ Global search on all connected systems including file content
- ▶ OCR engines to search images
- ▶ Providing search services for invocation from external systems
- ▶ Several user profiles and permissions management
- ▶ Indicators and reporting on all indexed data types and performed searches
- ▶ Web Crawling com notificações e actualizações automáticas

*The information you need
at the right time.
ZapView, a step ahead.*

Search Interface

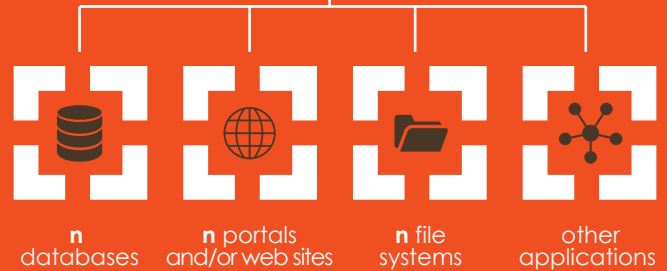

- Simple search using logical operators (+, -, *, "")
- Customizing the search results presentation according to the client preferences and priorities
- Faceted filtering by content type aligned with client business including drill down and drill up mechanisms into results
- Last searches suggestion (autocomplete) and spell check based on existing terms
- Dynamic and custom advanced search according to the information you need
